## **DETAILED ACTION**

### ***Drawings***

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 13 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Please clarify claimed recitation of "the bulk terminal of each of the plurality of pull-down transistors is coupled to the source of the corresponding pull-down transistor" because it seems as the plurality of pull-down transistors is coupled to themselves.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2819

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 12, 18 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Stockstad (U. S. PAT. 6,366,167).

In claim 12, Stockstad teaches all claimed features in Fig. 6A, a method comprising: providing a plurality of input signals ( $V_{in+}$ ,  $V_{in-}$ ) to a plurality of pull-up transistors (302, 304); coupling each of the plurality of pull-up transistors to one of a plurality of pull-down transistors (502, 504); and driving the plurality of pull-down transistors with a plurality of differential low swing signals to output a plurality of low voltage differential signals ( $I_o$ ) in response to the plurality of input signals.

In claims 18 and 20, Stockstad teaches all claimed features in Fig. 6A, an apparatus comprising: means for providing a plurality of input signals ( $V_{in+}$ ,  $V_{in-}$ ) to a plurality of pull-up transistors (302, 304); means for coupling each of the plurality of pull-up transistors to one of a plurality of pull-down transistors (502, 504); and means for driving the plurality of pull-down transistors (502, 504) with a plurality of differential low swing signals ( $V_{in+}$ ,  $V_{in-}$ ) to output a plurality of low voltage differential signals ( $I_o$ ) in response to the plurality of input signals; and means for generating the plurality of low swing differential signals ( $I_{o+}$ ,  $I_{o-}$ ).

6. Claims 14-17 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. Claims 1-11 appear to comprise allowable subject matters.
